

Fifteen origins: rolling 24-month window, 5-month spacing. Consecutive origins share 79.2% of their training data (D28)

One origin resolved: train, purge, validation, purge, then the out-of-sample span. Purge drawn 22× wide — it is  $H = 24$  hours

- train, 21 months (scaler fit here and nowhere else)
- validation, final 3 months
- $H$ -step purge, both boundaries (D24)
- test blocks 1-6, 30 days each
- out-of-sample span (= the six test blocks)
